

GraftPro™

GRAFT PREPARATION SYSTEM

Arthrex® 

Decades of graft preparation experience and feedback from surgical teams have culminated into the GraftPro™ Graft Preparation System. The GraftPro system has numerous features that simplify and accelerate graft preparation of soft tissue, BTB and GraftLink® grafts.

- Ratcheting sliders on the GraftPro allow automatic locking of attachments. A simple squeeze releases the sliders and allows fast repositioning.

- The small, lightweight board fits easily onto crowded tables. Nonslip feet hold securely during graft preparation.

- Dual tracks allow preparation and tensioning of two grafts simultaneously and simplify "Y"-shaped graft prep.

- Modular attachments allow repositioning into a fixed or sliding position at any angle and quick release of attachments to facilitate removal during FiberLoop® suturing.

- Enhanced button holders easily lock buttons into place to eliminate dislodging during graft prep.

- The BTB well secures the bone block during cutting and drilling. Measurements help approximate sizing. A slot allows passage of drill bits and needles through bone block.

- The optional graft-cleaning board clamp holds tissue firmly against the board during tissue removal.

GraftPro™ Graft Preparation System (AR-2950DS) includes:

GraftPro Case - AR-2950DC

A small footprint takes up minimal space on the side table. Logically laid out to ensure minimal set-up time and quick assembly.

GraftPro Base - AR-2950D

Lightweight board with nonslip feet facilitates usage on side table or Mayo stand. Dual tracks with ratcheting sliders make graft positioning and tensioning simple and fast. Cleaning board and BTB well secure grafts to the board during preparation.

Adjustable Posts - AR-2950AP

All-purpose posts can secure soft tissue or suture within recesses.

Tissue Clamps - AR-2950SC

Improved clamps hold grafts tightly in atraumatic jaws. Low profile jaws simplify loading of graft limbs.

RetroButton®/ACL TightRope® Button Holder w/Ruler - AR-2950BH

ACL TightRope and RetroButton implants can be loaded into the holder by depressing the spring-loaded latch that automatically closes over the top of the implant and holds it securely during graft prep and tensioning. The ruler extension allows estimation of graft/loop size in relation to the socket depth and can assist with graft-marking.

GraftLink® Attachment - AR-2950GH

Improved GraftLink® attachment secures an ACL TightRope button into place with a spring-loaded sleeve that closes over the button to hold it securely during graft prep and tensioning. There is also an alternative rubber grommet option for attachment of the ACL TightRope ABS loop or graft sutures.

GraftLink Attachment with Tensiometer - AR-2950GT

This attachment also includes the spring-loaded sleeve and rubber grommet but incorporates a tensiometer to approximate force-of-graft tensioning.

Sizing Block - AR-1886

Lightweight aluminum block with easy access slots for tensioning sutures. The block includes sizing holes from 4.5-12 mm with half sizes.

Optional:

Graft Clamp for Cleaning Board - AR-2950CBC

Secures grafts to the cleaning board to eliminate movement during cleaning, sizing and suturing.
